The LSG has high level of tissue specificity for lungs and is overexpressed in cancerous tissues. The sequence serves as a diagnostic marker for detecting, monitoring, staging and prognosticating lung cancer. The diagnosis involves comparing levels of LSG in samples obtained from patient and normal control.

LSGs are useful in the treatment and diagnosis of lung cancer. The treatment of lung cancer comprises the administration of a molecule which down regulates the expression of an LSG. An immune response can be mounted against a target cell expressing an LSG. Identification of potential therapeutic agents for use in imaging and treating lung cancer which comprises screening molecules for an ability to bind to or decrease expression of an LSG relative to LSG in the absence of the agent where the ability of a molecule to bind to the LSG or decrease expression of the LSG is indicative of the molecule being useful in imaging and treating lung
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Chen

Sequences AAZ87205-Z87210 represent cDNAs encoding six human concurred to the construction of neurotransmission-associated proteins (NTAPs, AAY77121-Y77126). The present sequence, clone 2799056, encodes a putative odorant-binding component sequence, clone 2799056, encodes a putative odorant-binding component sequence, clone 2799056, encodes a putative odorant-binding component sequence of the construction of neurological diseases (e.g., Alabeimer's, Parkinson's component sequence, Alabeimer's, Parkinson's component sequence, Alabeimer's, Parkinson's component sequence of the construction of constr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Вр

LSGs are useful in the treatment and diagnosis of lung cancer. The treatment of lung cancer comprises the administration of a molecule which down regulates the expression of an LSG. An immune response can be mounted against a target cell expressing an LSG. Identification of potential therapeutic agents for use in imaging and treating lung cancer which comprises screening molecules for an ability to bind to or decrease expression of an LSG relative to LSG in the absence of the agent where the ability of a molecule to bind to the LSG or decrease expression of the LSG is indicative of the molecule being useful in imaging and treating lung
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New lung cancer -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAA37022 to AAA37144 encode the new isolated human transmembrane, receptor or secreted PRO polypeptides given in AAY99402. The transmembrane and receptor PRO proteins can be used for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interactions. The polypeptides and nucleotide sequences encoding then have various industrial applications, including uses as pharmaceutical and diagnostic agents. AAA37145 to AAA3730 represent PCR primers and hybridisation probes used in the isolation of the PRO polypeptides from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        small

The sequences of the CC invention can be used to detect the presence of a tumour in a mammal by CC comparing the level of expression of a PRO polypeptide in a test sample CC of cells from the animal and a control sample of normal cells, whereby a CC higher level of expression in the test sample indicates the presence of a tumour in the mammal Mammals include dogs, cats, cattle, horses, sheep, CC pigs, goats and rabbits but are preferably human. The polypeptides can be CC used to stimulate tumour necrosis factor (TMF) alpha release from human CC subjections can be used to determine the presence of tumours and also CC susceptibility to tumour development, particularly adrenal, lung, colon, CC breast, prostate, rectal, cervical, or liver tumours, in mammalian CC subjects. The oligonucleotide probes specific for the PRO nucleic acids CC can be used for genetic analysis of individuals with genetic disorders.

                                                                                                                                                                                                                                                The present sequence is the coding sequence for a human PRO polypeptide (secreted and transmembrane). The PRO protein, and PRO agonists, PRO antagonists or anti-PRO antibodies are useful for preparation of a medicament useful in the treatment of a condition which is responsive to the PRO protein, agonists, antagonists or anti-PRO antibodies. The PRO protein may also be employed as molecular weight markers for protein electrophoresis. The PRO coding sequence has applications in molecular biology, including use as hybridisation probes, and in chromosome and meaning the protein and the protein sequence has applications.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to secreted and transmembrane proteins. These proteins and the DNA encoding them may be used as hybridization probes, in chromosome and gene mapping and in the generation of anti-sense RNA and DNA. They may also be used used to generate either transgenic animals or knockout animals which are in turn useful for development and screening of therapeutically useful reagents. The nucleic acids may also be used in gene therapy.

                                                                                                                                                             ρy
                                                                                                                                Вþ
                                                                                                                                                                                                   В
                                                                                                                                                                                                                                                                                                                                                         The invention relates to isolated polynucleotide (I) and C polymeptide (II) sequences. (I) is useful as hybridisation probes, CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The C polynucleotides are also used in diagnostics as expressed sequence tags CC for identifying expressed genes. (I) is useful in gene therapy techniques CC (II). (II) is useful in gene therapy techniques CC (II). (II) is useful in gene therapy techniques CC (II). (II) is useful in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical CC imaging of sites expressing (II). (I) and (II) are useful for treating CC imaging of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations CC responsible for genetic disorders or other traits to assess biodiversity CC and to produce other types of data and products dependent on DNA and CC and not acquences. AAS64197-AAS94564 represent novel human CC Specification, but was obtained in electronic format directly from WIPO CC at the wino, int/only/nhilshad not segmences of the invention.

The present invention provides the protein and coding sequences pf. novel human G-protein coupled receptors, designated NOV1, NOV2, NOV3, NOV4, NOV5a, NOV5b, NOV6b, NOV7, NOV8a, NOV8b, NOV9 and NOV10. These can be used in the treatment of NOVX related diseases, including cancer, metabolic, neurodegenerative, immune, haematopoletic, developmental, retinal, feeding, neurological and psychotic diseases and disorders and infections. The present sequence is the NOV6b coding sequence, the gene for which is found on chromosome 20. The NOV6b protein shares homology
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Majumder

These cabe used in the treatment of NOVX related diseases, including cancer, metabolic, neurodegenerative, immune, haematopoietic, developmental, retinal, feeding, neurological and psychotic diseases and disorders and infections. The present sequence is the NOV6a coding sequence, the gene for which is found on chromosome 20. The NOV6a protein shares homology
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New G protein-coupled receptor related polypeptides and polynucleotides for diagnosis, prevention and treatment of metabolic, neurodegenerative, retinal, immune, hematopoletic disorders, diabetes,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            QУ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AX297019 to AA297137 represent 94 isolated human secreted protein genes. CC AAY86215 to AAY86333 are the secreted proteins encoded by the 94 human cc genes. This sequence represents a fragment of one of the human secreted proteins. The genes and their corresponding secreted polypeptides are cc useful for preventing, treating or ameliorating medical conditions, cc e.g., by protein or gene therapy. Also pathological conditions can be cd idequosed by determining the amount of the new polypeptides in a sample cc was are described for each of the 94 genes, based on which tissues they care most highly expressed in, and include developing products for the cd idequosis or treatment of cancer, tumours, developmental abnormalities cand foetal deficiencies, blood disorders, diseases of the immune system, cd isorders, schizophrenia, arthritis, asthma, psoriasis, sepsis, skin cd disorders, atherosclerosis, diabetes, cardiovascular disorders, kidney cd disorders, digestive/endocrine disorders, infections and AIDS. The polypeptides are also useful for identifying their binding partners.

CC The sequences shown in AAY86334 to AAY86585 represent fragments of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ş
                                         associated proteins represented in AAB58106 - AAB5848. Lung cancer associated proteins and polynucleotide sequences, their agonists, and ansociated proteins and polynucleotide sequences, their agonists, and ansociated proteins and polynucleotive; cytostatic; cardioactive; and immunomodulatory; muscular active general; vulnerary; gastrointestinal general; nephrotropic; antiinfective; gynecological; or antibacterial activity. The invention also includes antibodies specific for the protein or polynucleotide sequences. The lung cancer associated polynucleotide sequences may be used for detection of lung cancer, chromosome identification, as chromosome markers, and for numerous other disorders such as neural, immune, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal, and proliferative disorders. The proteins may also be used in the treatment of wounds and infectious diseases. Polynucleotide sequences AAF18425 - AAF18433 and peptide AAB58549 are used in the course of the invention for the identification and characterisation of the polynucleotide and protein

genes. This sequence represents a fragment of one of the human secreted proteins. The genes and their corresponding secreted polypeptides are cuseful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Also pathological conditions can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new genes. Specific cuses are described for each of the 94 genes, based on which tissues they are most highly expressed in, and include developing products for the diagnosis or treatment of cancer, tumours, developmental abnormalities and foetal deficiencies, blood disorders, diseases of the immune system, autoimmune diseases, inflammation, allergies, Alzheimer's and cognitive disorders, atherosclerosis, diabetes, cardiovascular disorders, kidney clasorders, atherosclerosis, diabetes, cardiovascular disorders, kidney clasorders, digestive/endocrine disorders, infections and AIDS. The sequences shown in AAY86334 to AAY86585 represent fragments of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     16-JUN-1998;

The present invention describes a library of polynucleotides comprising 1079 nucleotide sequences (given in AAH30067 to AAH31145). Also described are: (1) an isolated polynucleotide (I) having at least 90% identity to one of the 1079 sequences; (2) a recombinant host cell containing (I); (3) an isolated polypeptide (II) encoded by (I); (4) an antibody that specifically binds to (II); (5) a vector comprising (I); and (6) a method of detecting differentially expressed genes correlated with a cancerous state of a mammalian cell comprising detecting a gene product encoded by 50 the 1079 sequences given in the specification. The polynucleotides are used to monitor patients having (or susceptible) to cancer to detect potentially malignant events at a molecular level before they are detectable at a gross morphological level. The polynucleotides are also useful for monitoring the efficacy of various therapies and preventive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      28-SEP-1998;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.

The LSG has high level of tissue specificity for lungs and is overexpressed in cancerous tissues. The sequence serves as a diagnostic marker for detecting, monitoring, staging and prognosticating lung cancer. The diagnosis involves comparing levels of LSG in samples obtained from patient and normal control.
